

Startup Blueprint Generator Agent

Name - Anshul Pravin Bhusal

Email – 202501040341@mitaoe.ac.in

College – MIT Academy of Engineering

Program	AICTE IBM SkillsBuild Summer Internship Program (SIP) 2026
Organised by	Edunet Foundation in collaboration with IBM
PS Number	Problem Statement No. 20
Category	Agentic AI using Retrieval-Augmented Generation (RAG)
Branch	Computer Engineering
Knowledge Sources	Startup portals, incubator databases, government policy documents (curated knowledge base)
Technology	IBM Cloud Lite services — IBM watsonx Orchestrate, IBM Granite Models

Problem Statement

Aspiring entrepreneurs often struggle to translate a raw startup idea into a structured, actionable business plan. Information about market research, funding options, government schemes, competitor analysis, and legal requirements is scattered across unreliable and disconnected sources such as startup portals, incubator databases, and policy documents. Without personalized, real-time guidance, many founders face delays and ambiguity in moving from idea to implementation.

There is a clear need for an AI-driven assistant that can retrieve relevant startup information and generate a complete, structured business blueprint directly from a simple description of a founder's idea — eliminating ambiguity and accelerating the journey from concept to launch.

Task

Design, build, and deploy an agentic AI system — the **Startup Blueprint Generator Agent** — powered by Retrieval-Augmented Generation (RAG), that transforms a user's startup idea into a complete, actionable business blueprint. The agent must:

- Retrieve relevant data on market research, funding options, competitor analysis, revenue models, government schemes, and legal requirements from a curated knowledge base.
- Accept a startup idea described in simple, plain language from the user.
- Generate a structured business plan including a Business Model Canvas, estimated budget, go-to-market strategy, and potential investor connections.
- Ground every generated response in retrieved knowledge, avoiding fabricated scheme amounts, investor names, or legal details.
- Ask clarifying questions when the user's idea is vague, before generating the full blueprint.

Knowledge Base Details

Source	Type	Description
Government Schemes	Document	Startup India, MSME, and state-level schemes and incubation benefits
Funding & Investor Directory	Document	Angel networks, VC firms, incubators, and funding-stage guidance
Legal & Compliance Checklist	Document	Business registration types, GST, IP, founder agreements
Business Frameworks	Document	Business Model Canvas, revenue models, go-to-market templates
User Startup Idea (input)	Text	Free-form description of the founder's startup idea
Structured Business Blueprint (output)	Text	9-section blueprint: idea summary, BMC, market snapshot, budget, revenue model, GTM strategy, schemes, legal checklist, investor guidance

■ Knowledge base size: ~4 curated reference documents | Format: Text/PDF | Source: Government portals, incubator databases, policy documents

Mandatory Technology

- IBM Cloud Lite Account — Free tier account required at cloud.ibm.com
- IBM watsonx Orchestrate — Agent Builder for configuring, deploying, and orchestrating the agent
- IBM Granite Models — Mandatory IBM AI model family requirement per program guidelines
- Retrieval-Augmented Generation (RAG) — Knowledge base grounding for accurate, non-fabricated startup guidance
- IBM watsonx.ai — Prompt Lab for Granite model testing and configuration

Evaluation Criteria

- Quality and accuracy of the generated business blueprints (primary metric)
- Structure, completeness, and relevance of RAG-based knowledge retrieval
- Correct use of the IBM watsonx Orchestrate Agent Builder platform
- Clarity of problem understanding and solution documentation
- GitHub repository with all required files uploaded correctly
- Quality of PowerPoint presentation and panel viva performance
